Course code

The course code consists of a four-letter code (eg, PHYS for Physics) and a three digit number, the first number of which indicates the level of the course.

Course title

The course title (eg, Physics Research) provides a quick guide to the area covered by the course.

Points

This is the number of points that will be credited to your degree/diploma/certificate if you pass the course.

EFTS

EFTS means 'equivalent full-time student'. This is the Ministry of Education's basic unit of funding to the University. The EFTS value of a course is multiplied by the appropriate fee band to determine the fees for a course. The EFTS value can also be used to a guide to workload.

Course description

The course description is a brief summary of the topics that are covered by the course.

Prerequisites

Prerequisites (P) are the course(s) you need to have passed before you can enrol in a course.

Co-requisites

Co-requisites (C) are courses you must either have already passed, or be concurrently enrolled in, to enrol in a course.

School of Literacies and Arts in Education

EDCL 711 Image and Narrative

18 points 0.1500 EFTS

This course focuses on the picture book as a vehicle for exploring the nature of story and illustration in children's literature. It seeks to enable teachers to develop new strategies for helping children to respond to literature in terms of the visual language strand in English in the New Zealand Curriculum and images in terms of Art in the New Zealand Curriculum (knowing about art works). Furthermore, it enables parents and librarians to become more skilled in book selection in this genre.

EDCL711-08X (D) Refer to website for dates

EDCL 712 Story and Meaning: a Study of Myth, Legend and Folktales

18 points 0.1500 EFTS

This course focuses on myth, legends and folktales as a vehicle for exploring the nature of meaning in literature. It finally asserts, having examined a range of critical perspectives, a transactional model of the reading process and demonstrates how different critical perspectives allow various meanings to be negotiated. It consequently enables parents and professionals to develop a philosophical base in developing alternative strategies

for hooking children into books and responding to the experience of the book.

EDCL712-08X (D) Refer to website for dates

EDCL 713 Patterns of Language

EDCL 722 Genre in Children's Literature: an introduction

18 points 0.1500 EFTS

The concept of genre is foundational to a study of children's literature in that it is the means by which the field can be classified and studied. However, the reality of diverse writing is such that the term is problematic and provokes considerable academic debate. The aim of this course is to enable the course participant begin to understand the nature of the debate, to select a limited range of genre and to examine a range of texts within each genre and across age levels that exhibit typical characteristics of that genre, historical antecedents, ways of narrating, hidden ideologies and books that challenge the boundaries.

Not Offered in 2008

This course provides the opportunity to explore the nature and range of fantasy designated as children's literature.

It will be examined by exploring key authors and texts in terms of the nature of fantasy, historical development, genre characteristics, critical issues and transformations. The emphasis is on a broad knowledge of fantasy texts as opposed to a narrow study of a limited range of texts.

Not Offered in 2008

This course explores applications of fluid mechanics and hydraulic concepts in the modelling of marine pollution problems. The focus is on near field mixing from point sources of pollution. Although taught in a specific context, the approaches to modelling these mixing processes have numerous applications in other areas, such as volcanic eruptions, air pollution and fire engineering. A detailed treatment of the behaviour of wastewater once it is released into the environment is given. Those factors that influence the dilution of the effluent as it rises to the ocean surface are considered including the formation of jets, plumes and buoyant jets, as are the influences of ambient motion, ambient stratification and boundaries. The formation of surface fields and the influence of ambient mixing processes are also discussed.

P: Subject to approval of the Head of Department.

EDCT 701 **Learning in a Clinical Setting**
 10 points 0.0833 EFTS
 This first course of the Graduate/ Postgraduate Certificate in Clinical Teaching is designed for clinical educators/mentors or supervisors working within health professional programmes or within health settings as clinicians. It is an introduction to the role of the clinical teacher, the principles of adult learning and the teaching skills for clinical instruction within workplaces and health professional programmes. It provides an environment in which health educators can explore ways to enhance undergraduate, postgraduate and peer learning through improvements in a learning environment, supervision, teaching and assessment.

EDCT 704 Clinical Education Experience Programme

20 points 0.1667 EFTS
 This course consists of an applied teaching/supervision project in the workplace, negotiated through an individual learning contract with the course co-ordinator. The contract requires the student to apply processes and skills learned in EDCT701, EDCT702 and EDCT703, reflect on them, design and implement a project within an evaluative framework; gather data for self-assessment and discuss the learning and project outcomes with the college supervisor. The project must be based on evidence based educational principles and extend the learner beyond their current tasks and responsibilities.

EDCT 802 Designing and Managing Learning in a Clinical Setting

15 points 0.1250 EFTS
 This course builds on the content introduced in EDCT701 and focuses on the design and development of health professional curricula. It explores different approaches in health professional education through an exploration of the current literature and research. Participants are required to assess alternative perspectives; analyse these rigorously; and communicate their rationale for accepting a model applicable to their work context. Participants will also identify and compare models of supervision and processes for the management of individual learning experiences in a health context.

Not Offered in 2008

International political economy is an approach to the understanding rather than a strict discipline in itself. IPE offers us a chance to approach a number of issues from an interdisciplinary perspective. Increasing focus is not being directed at the connections between the historical, political, economic, sociological phenomena resulting in more complex and more accurate, descriptions, interpretations, and explanations of international political and economic events. In this course, you will be acquainted with the extant perspectives and approaches to the study of international political economy. In particular, you will be introduced to how these approaches (competing and rivals at times) are used to study national and international problems, institutions, and structures that have captured the interests of political scientists, economists, and policy makers.

ENEL 670 Error Control Coding 0.1000 EFTS

Not Offered in 2008

This course will focus on error control coding (also called forward error correction and error correction coding). It is used to increase reliability at the cost of throughput. Redundancy (non-data symbols) is added to the information to be transmitted in order to achieve this. The error correction decoder uses the redundancy to detect and/or correct errors in the received demodulated data. This course provides an overview of traditional error control coding theory, which provides the building blocks for modern coding theory. It will concentrate on linear binary and non-binary block codes, convolutional codes and coded modulation.

ENGE 471 Engineering Geology Research Methods and Practice 0.1250 EFTS

This course focuses on practical field skills, data collection and analysis, and the presentation of results from fieldwork. It also introduces computer manipulation of data and computer graphics/GIS skills.

ENGE471-08S1 (C)	Semester 1
------------------	------------

ENGE 472 Engineering Construction Practice 0.1250 EFTS

This course is concerned with the nature and properties of construction materials for civil projects, general design principles and construction practices in rock and soil, and selected case studies (both historical and current). It also considers appropriate engineering geology practice for various surface and subsurface projects, with emphasis on project failures and the implications for sound geotechnical practice. Knowledge of precedent is fundamental to civil engineering design and construction, and the course content is inherently practical rather than theoretical.

ENGE472-08S2 (C)	Semester 2

ENGE 476 Earthquake and Volcanic Hazards 0.1250 EFTS

The course develops aspects of both seismotectonic hazard evaluation and volcanic hazard mitigation, and

examines selected case histories of major disasters caused by tectonic processes. Slightly greater teaching time is allocated to active faulting, with emphasis on geological and seismological data input into hazard analysis. For the volcanic component emphasis is placed on hazard recognition, evaluation methods, surveillance techniques and mitigation measures. The course deals with the subject matter at an advanced level, and students with little or no geological background should seek advice prior to enrolment.

GEOG 310 Weather Systems

14 points 0.1167 EFTS
This course examines the processes responsible for day to day weather variations, and the operational techniques used in their analysis and forecasting. This includes both research and operational approaches to the study of synoptic scale weather systems and their impact. 0.1250 EFTS

Not Offered in 2008

This course will focus on examining case studies of tectonic sedimentary basins, both ancient and modern. These will include flexural basins such as foreland basins, collisional basins, forearc basins and passive margins; extensional basins such as rift basins, core complexes, backarc basins, intra-arc basins, and oceanic rifts; and strike-slip basins such as pull-apart basins, intra-arc basins, and transpressional and transtensional basins. GEOL 483 Petroleum and Coal Geology

0.1250 EFTS

Not Offered in 2008

The majority of the world's energy comes from fossil fuels. In New Zealand, Australasia and Asia, oil and gas are derived ultimately from coal and coal-bearing strata. Therefore, any exploration of oil and gas must be well founded in a basic understanding of coal geology. The use of coal and other carbon-based energy sources presents many challenges, not only in exploration but also in the downstream environmental effects. Today's geologists need to understand those consequences and risks.

HIST 281 Resistance and Conformity in Nazi Germany

22 points 0.1833 EFTS
Not Offered in 2008

For all its brutality, the Hitler regime was never able entirely to crush the resistance of German anti-Nazis. On the contrary, throughout the twelve years of the Third Reich, many tens of thousands of Germans risked imprisonment and torture in order to protest against specific Nazi policies or against the regime as a whole. On the other hand, millions of ordinary Germans passively conformed, actively collaborated, and/or looked on in silence as the Nazi regime plunged Europe into barbarism. This course examines both resistance/dissent and co-operation/collaboration amongst five key social groups in Nazi Germany: workers, soldiers, Christians, women and youth. Above all, the course investigates the impact of Nazi social and racial policies on German society, and the ways in which ordinary Germans responded to these policies. Key questions to be addressed in the course include: How do we define resistance and conformity in the context of Nazi Germany? How accurate is the description of Nazi Germany as *étotitarian*? To what degree did the Nazis achieve their social agenda? What impact did Nazi social policy have on the long-term development of German society in the twentieth-century? The course will be taught through a mixture of lectures and seminars. Particular emphasis will be placed on using primary sources and on exploring in depth the ideas of a limited number of key historians.

How were aspirations for natural science seeded into culture in the ancient world? And what had to happen culturally and intellectually before such aspirations began to be systematically fulfilled? HAPS 101 looks at ancient Mesopotamia, Greece, China, and India, as well as the important work of Arab-speaking peoples. It turns then to the intellectual re-awakening of Europe during the Middle Ages and the delightfully strange-seeming natural-philosophical investigations of the early renaissance. These topics are all important for understanding the revolutionary changes in society and knowledge which happened in seventeenth-century Europe (the "Scientific Revolution"), and thus the eventual ignition of science.

Not Offered in 2008

This course is designed to broaden and deepen students' understanding of Japanese society and culture through the study of various literary texts (novels, and short stories) written between 1868 and the present. Literary texts are therefore an important source of understanding of the Japanese people even for those students who are studying Japanese history or society. The course is taught from a similar perspective to cultural studies, although one of the aims is to enhance students' aesthetic appreciation of literary texts.

ENME 671 Computational Methods in Elasto-dynamic Inverse Problems
0.1000 EFTS

This course is intended to develop the theory and computational methods necessary to implement inverse problems in elasto-dynamics. These problems typically convert known displacement/strain information from a domain to parametric descriptions of the stiffness distribution within the domain, i.e. they allow for the imaging of elastic properties given motion measurements. These methods are widely used in a variety of fields but contain a host of computational issues that require special attention in their implementation. The course will take a hands-on approach to developing both traditional and novel techniques for the implementation of these methods.

Part One (Diane Proudfoot) This part of the course is an introduction to metaphysical and epistemological problems concerning meaning and the brain. If the mind is just the brain, and the brain is just jelly plus electricity, how can I have ideas? Do deep metaphysical statements like "The mind is just the brain," "I am a brain in a vat," or "Everything is fate" really say anything? Do males and females have different brains, and if so, what are the implications for epistemology? We look at both traditional and modern approaches to these problems. Part Two (Derek Browne) Topics discussed in the second half of the course include: scepticism; cognitive relativism and social constructivism about knowledge; the JTB analysis of knowledge and Gettier cases; reliabilism; foundations versus coherence in theories of justification for empirical knowledge; perception and evidence.

This course provides an introduction to the main semantic phenomena of natural language and to a simple formal analysis, based on first-order logic, of the semantic structure of sentences. Topics will include truth-

conditional theories of meaning, modality and possible worlds, predicates and arguments, truth-functional connectives, quantifiers, tense, scopal ambiguity, and the event-based analysis of action sentences. We also review central issues in pragmatics and the importance of implicature.

PHIL 310 History of Philosophy

Via a study of the works of chiefly Descartes, Locke, Berkeley and Hume, we critically consider some watershed developments toward the creation of analytic philosophy.

We sample the vast intellectual transformation that unfolded in seventeenth and eighteenth century Europe and the relationship this had both to the ignition of natural science and to the social and political transformations also unfolding. The course equips students with an ability to both appreciate and criticise whole philosophies wrought by time-tested geniuses of past times, compare these philosophies and in the process learn about rationalism and empiricism, the synthetic versus the analytic orientation in philosophy, the relationship of modern to ancient philosophy, the historical interconnection of science and philosophy, the significance of philosophy for social transformation, and various conceptions of the relationships between epistemology, metaphysics and moral philosophy.

This course will survey the origins of Western philosophy in the ancient world, from the Milesians to the Stoics.

We will focus on the emergence of rationality and the development of philosophical themes first articulated by the Presocratics, then in turn, by Plato and Aristotle, and beyond. Emphasis will be placed on the structure of knowledge, the nature of reality, aesthetics, and the contemplation of the good life.

PHIL 318 Special Topic: Philosophy of Religion: Rationality, Science and the God Hypothesis

28 points 0.2333 EFTS

Is it irrational to believe on faith alone, without evidence? Is the universe inexplicable, and morality impossible, without a creator and rule-giver? Can I survive my death? What is a soul? Is evolution consistent with religion? What is the supernatural and how can we talk meaningfully about what is beyond our universe? Can we show by pure logic that a supreme being exists? Doesn't all the suffering in the world prove that there is no God? Is there one and only one true religion? This course explores the traditional 'big' questions. Historically, philosophy of religion has been central to philosophy - and continues

to provide some of the most interesting and important problems.

Advances in medicine and the biological sciences raise many moral questions. We can now perform organ transplants, but there are too few donors. What principles should we use to decide who gets a needed organ? Fertility drugs enable people purposely to have multiple births in an overpopulated world. Should taxpayers subsidize this practice? We can now determine the sex of a fetus. Should people have abortions to avoid having a child of the unwanted sex? Should people be allowed to have abortions at all? People can be kept alive when they are in a persistent vegetative state having no more awareness than a vegetable (or so doctors say). Should we keep these people alive or withdraw nutrition and hydration? Who should be allowed to make this determination - relatives, the courts, or only the individual through an advance directive? These are just a few of the ethical issues covered in this seminar.

Not Offered in 2008

In this course, you will be acquainted with a variety of perspectives and approaches to the study of international political economy. In particular, you will be introduced to how these approaches (competing and rivals at times) are used to study national and international problems, institutions, and structures that have captured the interests of political scientists, economists, and policy makers. Increasing focus is now being directed at the connections between the historical, political, economic, and sociological phenomena resulting in more complex and more accurate descriptions, interpretations, and explanations of international political and economic events. Thus, this course in IPE offers us a chance to approach a number of issues from an interdisciplinary perspective.

PSYC 462 Special Topic: Work Well-being and Performance

0.1250 EFTS

The relationships between the nature of work, well-being and individual and organizational performance have been of central concern for researchers and HR professionals for some time now. Some of the earliest thinking in the field focused on the notion of the happy-productive worker; that more satisfied employees perform better. Although this notion has been largely dismissed, more recent research shows potentially important but more subtle links between how employees feel and how they perform. This course explores the nature of work and well-being. It reviews both empirical and theoretical work in the area. It examines stress, its causes and effects and reviews workplace interventions to prevent stress-related illness. It explores the use of the psychological contract in managing well-being at work and addresses some specific work-related issues such as bullying which have negative effects on well-being and performance. Drawing

on recent research and current trends this course will focus on: The nature and meaning of work; The nature of well-being; Stress and its impact on well-being; Feelings at work beyond stress and satisfaction, including moods and emotions; Performance at work; How feelings affect performance; The psychological contract; The roles of HR practices in shaping employee feelings and well-being; A health and Safety perspective to well-being at work; Interventions in the stress process; Work-life balance.

22 points 0.1833 EFTS
 Why does the universe exist, rather than nothing at all? Does life imply a designer? Can we show by pure logic that a supreme being exists? Is a person a non-physical soul or only a neural net encased in a skull? Can I survive my death or is belief in an afterlife a trick of evolution? Isn't all the suffering in the world evidence against the hypothesis of a benevolent God? Can human beings tell what is morally right and wrong, or do we need a "God's-eye-view"? Is science compatible with religion? Is there one and only one true religion? What is "faith" and what is "reason" and who decides? This course presupposes no prior knowledge of the philosophy of religion; it is aimed at students from a wide range of backgrounds.
